

# CLIPPER

Does it rapidly and efficiently

## The only way to cut wire ropes

**Cutting a wire rope is never easy in normal conditions, it's even worse in rescue operations and in hazardous environments when every second counts.**

Clipper 5, developed to meet the tough requirements of the Swedish Defence Forces but now available for everyone, is a lightweight, one-hand operated, easy-to use system that severs wire ropes up to 8 mm thick, instantaneously and efficiently. Just hook the head of Clipper 5 over the wire rope and press the trigger – and it makes no

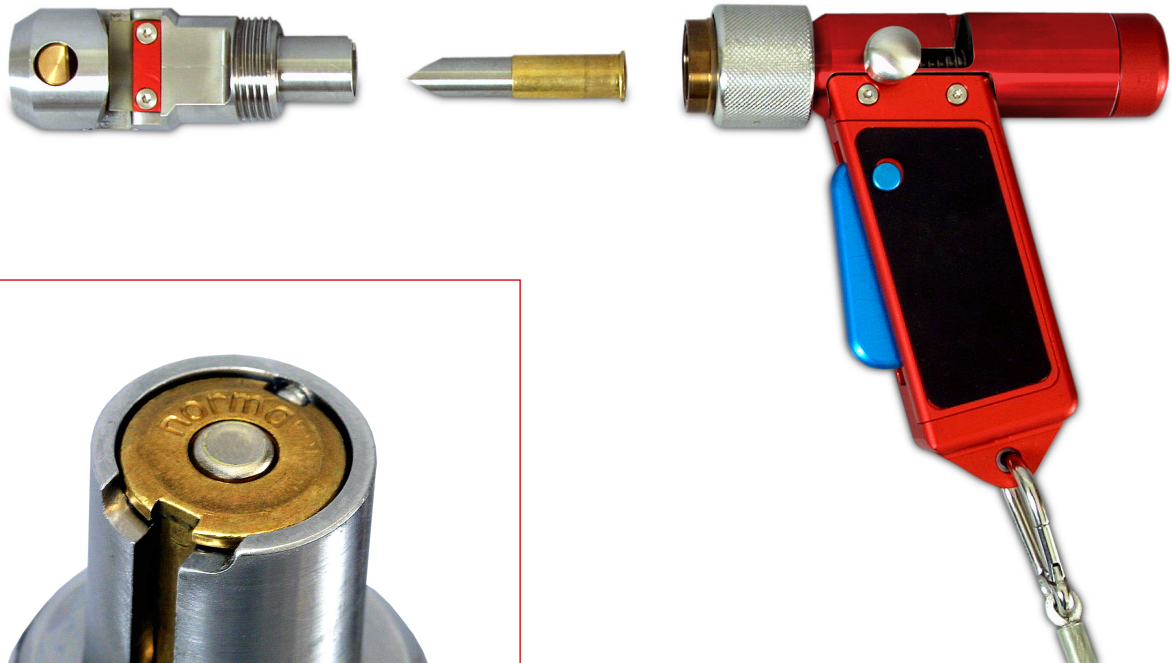

difference if the rope is moving fast, like from the winch of a rescue helicopter.

Wherever wire ropes are used, on helicopters, sailing boats or even on lifts there should be a place for Clipper 5 – it's the only way.
